

# BZ-2104S, Anti-floating Color and flower Dispersant

**Composition:** polyester modified silicone copolymer

**Appearance:** Yellowish transparent liquid

**Active portion:** 50%

**Recommended dosage:** Full amount: 0.1-0.5%; inorganic pigment: 3-10%; organic pigment: 10-30%

**Usage:** In order to obtain full effect, please test the most appropriate amount before use and add it before grinding.

## Features and advantages:

1. It has excellent dispersion and wetting effect on pigment, and good penetration and mixing properties for color mixture. Due to the presence of silicone components, it can prevent the occurrence of color flower, flocculation and stripe in color mixture.
2. Improve the wettability of pigment and maintain its stability, prevent floating color, blooming and precipitation;
3. It can increase the gloss of the coating surface, reduce the viscosity, prevent pinholes and reduce orange peel phenomenon.

**Package:** 25KG non-recyclable blue barrel.

The lid must be tightly closed after use if the product is not completely used.

**Storage:** keep away from heat source, light source and avoid light.

**Precautions:** : The color of this product may be darkened during long-term storage, which is normal and will not affect the performance.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
