

## BZ-263 Carbon Black Dispersant

**Composition:** a polymer block copolymer containing a pigment group

**Appearance:** Pale yellow transparent liquid

**Active portion:** 50%

**Application range:** PU coating NC coating, industrial coating, automotive coating

**Recommended dosage:** full amount, inorganic pigment, organic pigment, carbon black

0.1–0.5%

1–20%

20–30%

30–80%

**Usage:** The resin and solvent should be pre-mixed, then the additives are added slowly under stirring until they are dissolved evenly.

The pigment is added after the additive is added.

### Features and advantages:

1. The dispersed carbon black does not return to coarseness, does not increase thickening, and presents a blue phase; the dispersion effect is excellent;
2. The dispersion effect is excellent, and the transparency of transparent pigments and the covering power of solid color pigments are excellent.
3. Suitable for high grade automotive paint, high grade dark furniture paint, increase the gloss of the paint, reduce viscosity.

**Package:** 25KG non-recyclable blue barrel.

The product is not completely used. The lid must be tightly closed after use.

**Storage:** keep away from heat source, light source and avoid light.

**Precautions:** The color of this product may be darkened during long-term storage, which is normal and will not affect the performance.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only.
