

## BZ-20000 Dispersant

**Composition:** polymer

**Appearance:** Light yellow transparent liquid

**Active content: 100%**

**Application range:** industrial coating, automotive coating, plastic paint, epoxy coating, ink and so on

**Recommended dosage:** inorganic pigment, organic pigment, carbon black

2-5%

10-20%

30-80%

**Usage:** The resin and dispersant should be pre-mixed, then the solvent should be added slowly under stirring until it is dissolved evenly. The pigment should be added after the additive is added. Please test the appropriate amount before use.

### Features and advantages:

1. Improve the wetting performance of pigment, can improve the amount of pigment added in pigment thickened slurry, enhance the color development of pigment, have high dispersion performance and excellent storage stability;
2. Excellent grinding and dispersion effect on carbon black and organic pigments; widely used in various ink systems, especially for gravure printing, screen printing, UV screen printing ink, PVC ink;
3. For alcohol sol and alcohol water sol, solvent-based color paste, color paste and color sheet, the dispersion effect is outstanding, and the viscosity reduction effect is very good.

**Package:** 25KG non-recyclable blue barrel.

The lid must be tightly closed after use if the product is not completely used.

**Storage:** keep away from heat source, light source and avoid light.

**Precautions:** Carefully evaluate the relative amount of use before use.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
