

BZ-482 Deep hole defoaming and defubbing agent

Composition: Alcohol modified organic silicon compounds

Appearance: colorless transparent liquid

Active ingredients: 100%

Application range: : used for roller coating, spray coating UV, epoxy, thick paint coating.

Recommended dosage: Total formula 0.01-0.5%

Usage: It can be added at any time during the production process, including after addition. Please stir evenly and test before use.

Features and advantages:

1. It has the effect of suppressing foam, defoaming and strong breaking of foam. It is used for unsaturated resin/PU primer defoaming and suppresses foam very well. It can solve the problem of releasing bubbles in deep hole wood grain of high-demand one-time wood primer.
2. Good effect on foam suppression and defoaming of UV roll coating and dip coating.

Package: 25KG non-recyclable blue barrel.

The lid must be tightly closed after use if the product is not completely used.

Storage: keep away from heat source, light source and avoid light.

Precautions: Carefully evaluate the effects on solubility and crater before use.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
