

W-6300 Water-oil universal handfeel agent

Composition: Polyether modified acrylic functional group polymerization

Appearance: Light yellow transparent liquid

Active portion: 100%

Application range: Solvent coating, Industrial paint, Rubber paint, Water-based coating, Etc.;

Recommended dosage: Total formula amount 0.05%-1% (the most appropriate amount should be tested before use)

Usage: It can be added at any time in the production process, or later. Please test before use.

Alkanes and aromatics can be diluted in any ratio.

Features and advantages:

Suitable for the radiation curing system, can be crosslinked in the network structure of the polymer, so it can be permanently fixed on the surface of the coating film,

Smooth feeling; good compatibility with various systems, and little influence on transparency.

Package: 25KG non-recyclable blue barrel.

The product is not completely used. The lid must be tightly closed after use.

Storage: keep away from heat source, light source and avoid light.

Precautions: carefully evaluate the specific amount in the coating system before use.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
