

W-6100 Substrate wetting agent

composition: Silicone twin structure surfactant

Appearance: Yellowish transparent liquid

Active portion: 100%

Application range: Water film paint, Automotive paint, Wood paint, Industrial coating, Printing ink and gloss paint;

Recommended dosage: For full dosage: 0.1-1.0%

Usage: can be added at any time in the production process, including after addition, please stir evenly, please test before use.

Features and advantages:

1. It has excellent compatibility and long-term performance, effectively reduces surface tension, improves substrate wettability and leveling performance, and has excellent anti-puncture effect.
2. Extensive substrate wetting is applied and performs well in problematic substrate systems, no unstable bubbles.
3. Very suitable for water-based systems, but also suitable for solvent-based systems, suitable for clear paint and pigment paste.

Package: 25KG non-recyclable blue barrel.

The lid must be tightly closed after use if the product is not completely used.

Storage: keep away from heat source, light source and avoid light.

Precautions: Carefully evaluate the effect on solubility and crater before use.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
