

RS-245 Wetting Agent

Composition: Polyether siloxane copolymer

Appearance: Yellowish transparent liquid

Active portion: 100%

Application range: Plastic coating, Wood coating, Building coating, Industrial coating.

Recommended dosage: Total formula 0.1-1.0% (test the most appropriate dosage before use)

Usage: can be added at any time in the production process, please test before use.

Features and advantages:

1. RS-245 is a polyether siloxane copolymer with an efficient substrate wetting agent, which has good wettability on difficult to wet substrates such as wood and plastic.
2. It can significantly reduce the surface tension of the coating system and has excellent leveling, wetting and spreading ability.
3. The aqueous solution is transparent, has good compatibility with resin, low foaming and no unstable foaming.

Package: 25KG/200kg non-recyclable blue barrel.

The product is not completely used. The lid must be tightly closed after use.

Storage: keep away from heat source, light source and avoid light.

Precautions: It has good compatibility with the main resin, and the most suitable amount of wetting effect should be found through test.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
