

DB-100 PE Special Drying Agent

Composition: Special modified organic amine compounds

Appearance: Transparent to yellowish transparent liquid

Active content:100%

Recommended dosage: Primer: 0.1-0.5%; topcoat: 0.05-0.6%

Features and advantages:

1. PE unsaturated resin reaction drying agent, high reaction activity, so it is often used in the formulation of unsaturated resin reaction.
2. The product is a high strength active catalyst with small dosage in the formula, fast reaction and stable crosslinking.
3. The product is used to accelerate the sanding of the primer, and can accelerate the dry work for the topcoat, shorten the packaging and bonding time of the coated object.
4. When using this product, please add it directly into blue water for better effect.

Package: 25KG non-recyclable blue barrel.

The lid must be tightly closed after use if the product is not completely used.

Storage: keep away from heat source, light source and avoid light.

Precautions: Carefully evaluate the specific amount in the system before use.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
