

## H800 Yellow-resistant drying agent

**Composition:** Organic amine compounds

**Appearance:** Colorless or pale yellow liquid

**Active content:** 100%

**Recommended dosage:** Primer: 0.1-0.6%; topcoat: 0.1-0.8%

**Usage:** Add after complete dispersion.

**Features and advantages:**

1. The catalyst is an organic amine polyurethane and isocyanurate reaction catalyst, used for the primer to significantly accelerate the grinding, used for the top coat to accelerate the dry time, shorten the coating and bonding time of the coated object;
2. The drying time is several times that of organotin, and the stability is good, almost no side effects.
3. The yellow resistance performance is quite good, and the effect is better when used with tin type drying agent.

**Package:** 25KG non-recyclable blue barrel.

The lid must be tightly closed after use if the product is not completely used.

**Storage:** keep away from heat source, light source and avoid light.

**Precautions:** Carefully evaluate the specific amount in the system before use.

The above information is based on the product situation. Due to different producer formula, production process and construction conditions, the above statement is for reference only. The company does not assume any legal responsibility, please test the dosage before use. The company reserves the right to improve its products and any changes in specifications will not be notified in advance.
