

ADP Adhesion Promoter

Composition: Polymer surface adjuster solution

Appearance: Colorless to pale yellow liquid

Active portion: 70%

Application range: Metal paint, Aluminum, Zinc, Stainless steel, Aluminum alloy surface treatment.

Usage and dosage: Add to the surface paint, 1-5% of the total amount of paint, stir evenly.

Features and advantages:

1. Excellent adhesion to aluminum alloy, zinc plate, stainless steel, electroplated surface, iron and other metal surfaces.
2. The high temperature paint does not change color and does not affect other properties.
3. It can improve the toughness and impact resistance of coating film.
4. It does not affect the storage stability of the coating, and can withstand high temperature above 280°C.

Package: 25kg/200kg blue barrel not recycled.

The product has not been used completely before, and the inner and outer covers must be tightly closed after use.

Storage: keep away from heat source, fire source and light.

Precautions: When ADP is added to the topcoat, the compatibility between ADP and the topcoat should be evaluated.
